

Executive Business Report – Task 4

Project Title

Executive Sales Dashboard using Power BI

Objective

The objective of this project is to analyze sales data using Power BI by creating a data model, DAX measures, and an interactive executive dashboard for business decision-making.

Business Insights

1. Is business growing consistently?

- Sales fluctuate over time and are not consistently increasing. Some months show higher sales while others decline.

2. Which region is driving the most revenue?

- The **Central** region generated the highest sales in the dashboard.

3. Which category has the highest profit?

- **Office Supplies** generated the highest total profit.

4. Are there seasonal trends?

- Yes. Monthly sales vary, indicating seasonal changes in customer demand.

5. Which customer segment is most valuable?

- The **Consumer** segment contributes the largest share of total sales.

6. Where should management focus?

- Increase sales in lower-performing regions.
- Improve profit margins.
- Focus marketing on high-performing customer segments.
- Continue promoting products in the Office Supplies category.

Conclusion

This dashboard provides a clear view of sales performance, profit, customer segments, and regional performance. The interactive filters help management analyze data quickly and make informed business decisions.
